The following is an examiner's statement of reasons for indicating allowance of claim 1: The prior art teaches a variable speed drive comprising a converter stage, a DC link stage, and an inverter stage, but does not disclose that the converter stage is configured to provide a boosted DC voltage to the DC link stage and each inverter of the plurality of inverters is configured to provide an output AC voltage greater than the input AC voltage; and a plurality of connecting mechanisms, each connecting mechanism of the plurality of connecting mechanisms being connected in series between an inverter of the plurality of inverters and a corresponding motor of the plurality of motors, and wherein each connecting mechanism being configured to disconnect an inverter from a corresponding motor in response to receiving a control signal. This feature in combination with the rest of the claim limitations is not anticipated or rendered obvious by the prior art of record.

The following is an examiner's statement of reasons for indicating allowance of claims 8 and 19: The prior art does not disclose a chiller system comprising a variable speed drive being configured to provide an output voltage greater than the input voltage to the variable speed drive; and a plurality of contactors, each contactor of the plurality of contactors being connected in series between an inverter of the plurality of inverters and a corresponding motor of a compressor of the plurality of compressors, and wherein each contactor being configured to enable or disable a connection between the inverter and the corresponding motor of a compressor of the plurality of compressors in response to receiving a control signal. This feature in combination with the rest of the claim limitations is not anticipated or rendered obvious by the prior art of record.
